

October – December 2017

Junior Trimester Program

Symplectic Geometry and Representation Theory

The concept: A Junior Hausdorff Trimester Program (Junior HTP) gives young mathematicians (postdocs, junior faculty) the opportunity to carry out collaborative research in a unique environment. Proposals for workshops and mini-courses are explicitly encouraged, and senior scientists can be recruited as guest speakers. The facilities and dynamics of the Institute environment are conducive to productive and inspiring interaction.

Junior HTP in Symplectic Geometry and Representation Theory: We seek 30 scientists worldwide, preferably groups but also individuals, whose research interests fit this theme. Applicants should be open to project work with other participants. For successful applicants the stay in Bonn is fully financed by the HIM, so that they can apply for leave. We recommend stays of 3 months, but visits as short as 4 weeks are possible.

Call for applications: Groups of junior scientists and individuals are requested to include letters of intent, CVs, lists of publications and recommendation letters in the application packages. Please send applications using our online application form at <http://www.him.uni-bonn.de/representation-theory-2017>.
Deadline for application is **November 30, 2016**.
