Hausdorff Trimester Program

The Arithmetic of the Langlands Program

Organizers: Frank Calegari, Ana Caraiani, Laurent Fargues, Peter Scholze

The Langlands program aims to relate systems of polynomial equations with integer coefficients to automorphic forms, i.e. functions on symmetric spaces with a large number of discrete symmetries.

The focus of the trimester will be on some manifestations of this program, including:

- moduli spaces of shtukas
- p-adic techniques in local Langlands and the relation to geometric Langlands
- Shimura varieties and more general spaces in global Langlands

We will have the following activities:

- Summer School (May 11-15)
- Conference on Local Langlands and p-adic methods (July 13-17)
- Conference on Global Langlands, Shimura varieties, and shtukas (August 17-21)

Confirmed participants include:

Christophe Breuil
Pierre Colmez
Gabriel Dospinescu
Matt Emerton
Dennis Gaitsgory
Toby Gee
Michael Harris

Eugen Hellmann
Tasho Kaletha
Kiran Kedlaya
Chandrashekhara Khare
Mark Kisin
Kai-Wen Lan
Sophie Morel

Wieslawa Niziol
Vytautas Paskunas
Vincent Pilloni
Benjamin Schraen
Chris Skinner
Benoit Stroh
Richard Taylor

Jack Thorne
Akshay Venkatesh
Eva Viehmann
Zhiwei Yun
Sarah Zerbes
Wei Zhang
Xinwen Zhu

Call for participation: The Hausdorff Research Institute offers visiting positions for the whole period of the trimester program (for senior scientists, postdocs and PhD students). The deadline for applications is **October 31, 2019**. Please send applications (including CV and, for postdocs and PhD students, a letter of recommendation) using our online application form at <https://www.him.uni-bonn.de/langlands-program/online-application/>. In addition numerous fellowships for shorter periods are available.
