

# Feb 2008 – April 2008

## Junior Semester Program on **Computational Mathematics**

### **The Idea of Junior Semester Programs**

A Junior Hausdorff Semester Program (Junior HSP) gives young scientists (PostDocs, Junior Faculty) the chance to spend a period of 3 months at HIM in Bonn to carry out collaborative research in small groups of at least 4 researchers. The organization of up to two workshops during this period is encouraged. There will be the possibility to invite further participants from outside and senior scientists for talks or a mini course.

### **A Junior Semester Program in Computational Mathematics**

The first Junior Program will be devoted to Computational Mathematics. We look for applications from groups of scientists who intend to collaborate on a project within this area. The program has a capacity of about 20 positions, so that we can have several smaller groups within Computational Mathematics at the same time. Interaction between these groups is expected to be very fruitful. The stay in Bonn is fully financed by HIM so that the participants can apply for leave from their home institution.

### **Call for Applications**

Groups of junior scientists interested in participating in this Junior HSP should send their application (a short description of the research project of not more than 2 pages together with the CV and the list of publications of all participants) to the address below. The decision will be made by an external scientific advisory board.

**Applications** may be sent up until May 31st 2007 to (preferably by e-mail):

Professor Matthias Kreck, Director of HIM, Poppelsdorfer Allee 82, 53115 Bonn, [kreck@him.uni-bonn.de](mailto:kreck@him.uni-bonn.de)
